

README

Parish Outreach Email Campaigns

Three-email sequence, sent over ~10–12 days, to a 100-contact list of U.S. Catholic parishes and Guadalupe/Hispanic ministries. Segment A runs four emails over 14 days, since it carries the provenance email as well. Links point at **primosmaternos.com/parishes** (the parish-focused landing page), **primosmaternos.com/authenticity** (the certifications in full) or the codex-symbols blog post.

Segments

Split the list into per-segment tabs (or per-segment Google Sheets) before sending. In Gmail native mail merge (Compose → toggle **Multi-send**), each send draws from one recipient list.

Segment	Who	File	Lands on
A	Parishes and shrines dedicated to Our Lady of Guadalupe (named for her, or her shrine is central)	segment-a-guadalupe-parishes.md	/parishes
B	Guadalupe / Hispanic ministries at Catholic parishes not named for her	segment-b-guadalupe-ministries.md	/parishes

Segment	Who	File	Lands on
C	Catholic schools (K–12) with Hispanic enrollment or a Marian devotional culture	segment-c-catholic-schools.md	/schools
D	Diocesan offices — chanceries, Hispanic ministry, school superintendents	segment-d-diocesan-offices.md	/dioceses
Retail — Holiday	Individual customers + newsletter subscribers, Nov–Dec 2026	holiday-retail-2026.md	/gifts

Same 3-email cadence, different opening framing per segment. Segment C uses the schools-specific landing page and emphasizes bulk pricing for outfitting multiple classrooms.

Cadence

Email	Day	Subject direction	Purpose
1	Day 0 (Tue or Wed)	Authenticity + offer	Introduce Primos Maternos, name the price, land the CTA
2	Day 4	Symbolism of the image	Give value (blog post), no hard sell
3	Day 10	Parish use cases	Concrete ways to use it, final CTA

Send Tuesday/Wednesday mornings, Eastern time. Avoid Mondays and Fridays.

Personalization variables

Emails use **Gmail native mail merge syntax** — an @ prefix, all lowercase, no spaces. The column headers in your Google Sheet (or CSV imported into Sheets) must match these names exactly.

A ready-to-fill CSV template with all columns is at [list-template.csv](#) in this folder — download, open in Google Sheets, add your rows.

All email files below use these merge fields:

Variable	Example
@firstname	Maria
@parishname	Our Lady of Guadalupe Parish
@city	Newark
@state	NJ
@contactrole	Hispanic Ministry Coordinator
@guadalupeconnection	Parish patronage / Guadalupe shrine / Hispanic ministry

Segment-specific extras (add only for the segment that uses them):

Variable	Used by	Example
@schoolname	Segment C	St. Ignatius Catholic School
@schoollevel	Segment C (optional)	K-8 / High School / PK-12
@diocesename	Segment D	Diocese of Trenton
@parishcount	Segment D (optional)	97
@lastordersku	Holiday retail (optional)	24"×36" Gold Frame
@lastorderyear	Holiday retail (optional)	2024

If any field is missing for a row, either fill a sensible default in the CSV or exclude the row from that send — an email that says **Dear ,** is worse than no email.

UTM tracking

Append UTM parameters to every link so Google Analytics on primosmaternos.com attributes the traffic to the campaign:

```
?utm_source=openmoves&utm_medium=email&utm_campaign=parish-outreach-2026&utm_content=<segment>-<email-number>
```

Segments A and B use `utm_campaign=parish-outreach-2026`. Segment C uses `utm_campaign=school-outreach-2026` (separate campaign so schools traffic doesn't co-mingle with parish traffic in GA).

Examples:

```
https://primosmaternos.com/parishes?utm_source=openmoves&utm_medium=email&utm_campaign=parish-outreach-2026&utm_content=a-1
https://primosmaternos.com/schools?utm_source=openmoves&utm_medium=email&utm_campaign=school-outreach-2026&utm_content=c-1
```

The email files below already include the UTM-tagged URLs.

Compliance (CAN-SPAM)

Every commercial email needs these in the footer — Gmail multi-send doesn't add them automatically, so include them in the email template you save in Gmail:

- Physical mailing address (Saxon Enterprises, Inc. · Tinton Falls, NJ)
- Clear opt-out — e.g., “Reply UNSUBSCRIBE and I'll take you off the list.”
- Honest subject line and from-address (already covered)

The Novena drip and holiday retail are subscriber-consent based (people opted in), so the compliance surface is lower — but include the unsubscribe line anyway.

After the campaign

Watch three signals over the first 14 days:

1. **Open rate** by segment — Gmail multi-send doesn't track opens natively. If you need per-recipient open tracking, use YAMM (Yet Another Mail Merge) instead — it uses `{{First Name}}` -style tags, which means converting the emails back to `{{Var}}` syntax.
2. **Landing-page traffic** in GA filtered by `utm_campaign=parish-outreach-2026`
3. **Actual orders** — check `orders` table in Postgres for `stripe_payment_intent` records placed by parish emails

If a parish orders, follow up personally with a short thank-you and ask what they're using it for. That's next campaign's testimonial.
